

The right doors can really make the view. Our Exterior French and Sash doors are created with our exclusive ViewSaver® technology, and can be specified with WaterBarrier® and UltraBlock® technology upgrades. What does that mean? Well, you'll maximize your view of the outdoors while keeping the elements of nature away.

# Exterior French & Sash Doors

# WATERBARRIER® TECHNOLOGY

Simpson Performance Series® upgrades are the perfect blend of beauty and performance. Our innovative manufacturing processes minimize the adverse effects of moisture on wood doors, without sacrificing any of their charm.

WaterBarrier® technology, a component of our Performance Series, helps preserve the beauty of your Simpson doors. Available for a variety of entry, sash and French doors, this innovation affords you superior water protection.

WaterBarrier combines a medium density overlay (MDO) over the exterior surface of the door with PVC bars and glazing beads for an exterior that's not only resistant to moisture, but provides a beautiful surface for paint. And when combined with any wood species on the inside, you can match your interior woodwork and keep the warmth and natural beauty that wood provides.

When you see this icon throughout the catalog, it denotes doors that are available with WaterBarrier technology. To learn more about WaterBarrier technology, please see page 24.

## Impact-Resistant French Doors

Simpson's Impact-Resistant Doors are built to withstand sustained winds and high levels of impact with the beauty that only a wood door can provide.

### Glass Options Available

Now when you order an impact-resistant door, you don't have to settle for clear glass. You have a variety of textured glass options to choose from including:

Cross Reed	P516	Seedy Baroque
Delta Frost	Rain	Clear Laminate
Narrow Reed	Satin Etch	White Laminate

You may also choose to add Low-E argon to the glass unit, tint the glass bronze, grey, green, blue or order "turtle code compliant" glass. Contact Simpson for the latest impact-resistant glass offerings. To view these glass options, see page 12.

These doors have been tested for air, water and structural performance to rated design pressures and, when used in conjunction with our WaterBarrier® technology option, are ideally suited for coastal areas or other regions affected by severe weather. To ensure Simpson Impact-Resistant Doors meet code compliance in your area, contact your local building code officials.

Impact-resistance approved under Florida code report #FL9668 and Texas Dept of Insurance Approval Report number DR-289 and DR-291. Non-impact DP rated doors are under Florida code report #FL14487 and #FL14488.

For more information visit: [simpsondoor.com](http://simpsondoor.com), [floridabuilding.org](http://floridabuilding.org), or [www.tdi.texas.gov](http://www.tdi.texas.gov).

## More Designs Available

Dozens of additional full-lite door designs are available using Simpson Simulated Divided Lite (SDL) construction and/or WaterBarrier technology. Contact your Simpson Door supplier for details and specifications.

# Door Ways

You could say it takes a village to build a door. From the lumber inspector to the veneer grader to the stock rustler to the door shipper, it can take over 25 pairs of hands to make a standard Simpson door. Our doors give new meaning to the word "handcrafted."

## Exterior French Doors
